

24. A flywheel uninterruptible power source as described in claim 18 wherein said drag on the flywheel is determined by said charging power or current to maintain speed.

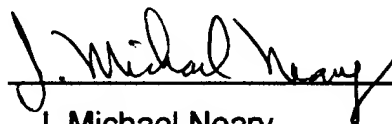

25. A flywheel uninterruptible power source as described in claim 18 wherein said flywheel is charged by using power from an alternating current primary source.

### Remarks

Applicant respectfully requests reconsideration of this application as amended herein.

Applicant believes that the claims now pending in this application are patentable and respectfully requests the Examiner to pass this application to issue.

Respectfully submitted,

J. Michael Neary  
Attorney for Applicant
